

ANTIFREEZE | COOLANT

G 12++

Description

50% coolant-antifreeze direct use last generation, developed for vehicles requiring hybrid technology (organic additives and silicates). Its additives provide excellent protection to all components of the cooling circuit of internal combustion engines.

Especially recommended for:

- high-tech engines, including Euro VI where aluminum protection at high temperatures is essential.
- Latest VAG group vehicles with standard TL 774G (G12 ++).
- Vehicles requiring type refrigerant MAN 324 type Si-OAT.
- Some American vehicles.

Properties

- Formulated with ethylene glycol base and additive hybrid technology (Si-OAT).
- Free of nitrites, amines and phosphates. Silicate added.
- Product long service life (Long Life).
- Excellent corrosion protection of all metals, including aluminum and light alloys.
- Compatible with gaskets, seals and paints.
- Excellent protection against freezing.
- High boiling point (up to 145 ° C). Avoid cavitation.
- It contains fluorescent leak detector.
- Product direct use. Do not dilute.

Physicochemical characteristics

characteristics	Standard	Typical value
Appereance	Visual	Red/Violet
Glycol content (% peso)	UNE 26-361/2	50
Density (kg./ L.)	ASTM D-1122	1,075
pH	ASTM D-1287	>8.3
Freeze point (° C)	ASTM D-3321	-37

EXCELENCIA PARA SU MOTOR
